Quotes from Entomology Undergraduates

What would you like to tell other students about the Entomology and Nematology Department?

“That the faculty is willing to work with you in order to help develop you as a student and scientist. As a minor in the program I can vouch that the Entomology Dept. is far more connected to the student body, their success, and development of future scientists. It sounds simple, but I feel it is an awesome aspect of the program that may be overlooked. That connection builds confidence that you can leave college, get a job, and be successful... a sense of security many students truly want.”
